

# BOHDAN STEPANENKO

Junior Frontend Developer

Wrocław, Poland | +48 720 821 723 | [LinkedIn](#) | [bogdanstepan2006@gmail.com](mailto:bogdanstepan2006@gmail.com) | [Portfolio](#)

## PROFESSIONAL SUMMARY

Junior Frontend Developer with hands-on commercial experience building responsive web applications with React, TypeScript, and Redux. Reduced page load time by up to 25% and cut manual reporting effort by 40% by optimizing rendering, API handling, and data pipelines across CRM and enterprise platforms. Delivered 30+ production features by partnering closely with backend teams on REST/GraphQL and WebSocket contracts.

## TECHNICAL SKILLS

**Languages:** JavaScript, TypeScript, Java  
**Frontend:** React, React Native (Expo), Next.js, Pixi.js, Vue, Redux Toolkit, HTML5, CSS  
**Backend & APIs:** Node.js, Java Spring, AWS, REST API, GraphQL, WebSocket, PostgreSQL  
**Tooling & DevOps:** Docker, Git, Jest  
**Methodology:** Agile/Scrum, Component-based architecture

## PROFESSIONAL EXPERIENCE

**Frontend Developer - GlobalLogic (Fixed-Term Project)** Mar 2026 - Jul 2026 (Internal task controlling tool)

- Reduced page load time by approximately 25% by optimizing API handling and component rendering logic.
- Accelerated delivery of new features by building 15+ reusable UI components adopted across multiple product teams.
- Enabled cross-team task tracking for multiple teams by developing an internal platform with task boards, filters, comments, status workflows, and role-based access control using React and TypeScript.

**Frontend Developer - TenThousand** Aug 2025 - Mar 2026

- Eliminated manual page refreshes for shipment tracking by implementing WebSocket-based real-time updates and notifications.
- Reduced duplicated code by approximately 25% by refactoring the application into feature-based modules and reusable components.
- Cut manual report preparation time by approximately 40% by building an analytics dashboard with charts, filters, data tables, and export functionality.
- Improved large-dataset page performance by approximately 20% by implementing pagination and reusable rendering components.
- Enabled zero-rebuild deployment across multiple environments by introducing runtime configuration for the frontend build.
- Delivered 15+ production features by partnering with a backend developer to define REST API and WebSocket contracts for a CRM platform covering customers, shipments, and orders.
